INTERIM ORDER

Webster County Water District ("Webster Water") filed its application on June 4, 1998 for a Certificate of Public Convenience and Necessity to construct a \$6,289,680 waterworks improvement project, for approval of financing, and for an adjustment to its water service rates. On July 7, 1998, Webster Water submitted a motion for an Interim Order authorizing construction of said project. This project consists of constructing a raw water intake structure and related facilities on the bank of the Green River; 8,900 linear feet of 18-inch PVC raw water transmission line from Green River to the existing water treatment plant; 4,100 linear feet of 4-inch PVC water transmission line to provide service to the raw water intake structure; and to expand and renovate the existing water treatment plant. On July 16, 1998, the Commission denied this motion.

On August 4, 1998, Webster Water submitted a motion for an Interim Order authorizing construction of the \$877,877 raw water intake structure portion of said project. Funding for the proposed projects will either be a \$750,000 short-term loan with an interest rate of 5.4 percent and \$127,877 in reserve funds or the use of a \$2,000,000 Local Government Economic Development Fund grant.

Webster Water now moves for an Interim Order which grants a Certificate of Public Convenience and Necessity for the proposed construction of the raw water intake structure.

This Order will address the raw water intake structure construction portion of the application. By subsequent Order in this case, the Commission will address the remaining projects, the proposed financing, and the rates necessary to provide the utility with an opportunity to recover its reasonable operating costs and service its debt.

After review of the evidence of the record and being otherwise sufficiently advised, the Commission finds that:

1. Webster Water proposes to construct a raw water intake structure and related facilities on the bank of the Green River to replace the wells currently in use in order to provide a better quality and quantity raw water source.

2. Webster Water has advertised for bids on the project and received an acceptable bid of \$877,877. August 14, 1998 is the absolute deadline for commencing construction of the raw water intake structure.

3. Drawings and specifications for the proposed construction were prepared by Neel-Schaffer, Inc. and have been approved by the Division of Water, Kentucky Natural Resources and Environmental Protection Cabinet.

4. Public convenience and necessity require that the construction identified in Webster Water's application be performed and that a Certificate of Public Convenience and Necessity be granted.

5. As none of the funding for the proposed raw water intake structure project involves the issuance of securities or evidences of indebtedness which are payable at periods exceeding two years, Commission approval of Webster Water's plan of financing is not required. KRS 278.300(8). In the event that financing on these projects is converted to long-term debt, Webster Water shall immediately notify the Commission.

IT IS THEREFORE ORDERED that:

1. Webster Water's motion for an Interim Order to proceed with construction of the raw water intake structure is granted.

2. Webster Water is granted a Certificate of Public Convenience and Necessity to proceed with the raw water intake structure proposed construction project as set forth in the drawings and specifications of record herein.

3. Webster Water shall obtain approval from the Commission prior to performing any additional construction not expressly authorized by this Order.

4. Any deviation from the construction approved shall be undertaken only with the prior approval of the Commission.

5. Webster Water shall furnish documentation of the total costs of this project including the cost of construction and all other capitalized costs (engineering, legal, administrative, etc.) within 60 days of the date that construction is substantially completed. Construction costs should be classified into appropriate plant accounts in accordance with the Uniform System of Accounts for Water Utilities prescribed by the Commission.

6. Webster Water shall require construction to be inspected under the general supervision of a professional engineer with a Kentucky registration in civil or mechanical engineering, to ensure that the construction work is done in accordance with the contract drawings and specifications and in conformance with the best practices of the construction trades involved in the project.

7. Webster Water shall furnish, within 60 days of the date of substantial completion of this construction, a copy of "as-built" drawings and a signed statement that the construction has been satisfactorily completed in accordance with the contract plans and specifications.

8. The financing plan proposed by Webster Water is continued generally.

9. Webster Water's application for adjustments to water service rates is continued generally.

10. Nothing contained herein shall be construed as constituting approval of any other portion of Webster Water's application.

Done at Frankfort, Kentucky, this 7th day of August, 1998.
